Summary

Data Engineer and GenAI-focused Software Engineer with 3+ years of experience building production-grade data pipelines, automation systems, and AI-powered internal tools. Strong experience in AWS, Databricks, and LLM-based applications with a focus on reliability, ownership, and measurable business impact.

Experience

MassMutual

Associate Developer

Aug 2022 – Present

Hyderabad, India

- Owned development of a GenAI-powered IT Service Desk automation using AWS Bedrock and ServiceNow APIs, reducing manual ticket triage and improving resolution time for recurring issues.
- Designed and deployed an HR Service Delivery AI agent that answers employee queries and escalates unresolved cases to the correct teams, improving response consistency and support ownership.
- Built retrieval-augmented generation (RAG) pipelines using Azure AI Search and vector databases to ground LLM responses in internal knowledge and reduce hallucinations.
- Developed and monitored production data pipelines using Databricks, Delta Live Tables, and Airflow, adding data quality checks and alerts to catch failures early.
- Implemented validation frameworks for legacy XML ingestion systems (Informatica, Informix), improving reliability of downstream analytics and reporting.
- Partnered with DevOps teams to containerize and deploy GenAI microservices using Docker, Terraform, and AWS Lambda for scalable, low-latency inference.
- Built an internal configuration comparison tool to validate file transfers between Axway and IBM systems, reducing migration-related incidents.
- Integrated external Crunchbase data into Affinity by building validation and routing logic, enabling clean, structured data for investment dashboards and analysis.

Achievements

- **Trailblazer Award (2025)** – Recognized for driving automation and engineering innovation across multiple enterprise platforms.
[View Recognition](#)
- **GenAI Hackathon Winner (2025)** – Secured 1st place among 50+ teams for building a scalable AI-powered IT Service Desk agent, later adopted as a pilot solution.
[View Hackathon Result](#)
- **MMI Hackathon Runner-up (2024)** – Achieved 2nd place among 40+ teams for developing an HR Service Delivery AI automation solution.

Technical Skills

- **Languages:** Python, SQL, JavaScript
- **Data Engineering:** Databricks, Delta Live Tables, Apache Airflow, ETL/ELT pipelines, data validation, data modeling, pipeline monitoring
- **Generative AI:** AWS Bedrock, RAG pipelines, vector search, LLM integration, Azure AI Search, Langflow, prompt engineering
- **Cloud & Platform:** AWS (S3, Lambda, IAM, Bedrock), Terraform, Docker, CI/CD, serverless architectures
- **Backend:** FastAPI, Flask, Node.js, REST APIs, microservices

- **Databases:** PostgreSQL, MongoDB, MySQL

Projects

- **Rice Price Calculator (Web Tool)**

Built a lightweight web tool to replace manual Excel calculations used by farmers to estimate production cost, selling price, and profit margins.

Education

Bachelor of Technology in Computer Science

Vardhaman College of Engineering

2018 – 2022

India
